# Contents

<b>List of Figures</b>	<b>xi</b>
<b>List of Tables</b>	<b>xvii</b>
<b>Preface</b>	<b>xix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Particle Environments . . . . .	1
1.2 Measurement Requirements . . . . .	1
1.3 Conversion to Physical Quantities . . . . .	5
1.3.1 Particle Fluxes . . . . .	5
1.3.2 Velocity Distribution Function . . . . .	5
1.3.3 Moments . . . . .	6
1.3.4 Gas Densities . . . . .	7
1.4 Required Accuracy . . . . .	7
1.5 Error Sources . . . . .	8
Bibliography . . . . .	10
<b>2 Review of Instruments</b>	<b>11</b>
2.1 Introduction . . . . .	11
2.1.1 Important Characteristics of Analyzers . . . . .	13
2.2 Detectors . . . . .	13
2.2.1 Faraday Cups . . . . .	13
2.2.2 Discrete Electron Multiplier . . . . .	14
2.2.3 Continuous Electron Multiplier . . . . .	15
2.2.4 Microchannel Plates . . . . .	18
2.2.5 Solid-State Detectors . . . . .	27
2.2.5.1 Energy Loss of Particles in Matter . . . . .	27
2.2.5.2 Silicon Solid-State Detectors . . . . .	29
2.2.5.3 Scintillators and Cherenkov Radiators . . . . .	32
2.2.6 Avalanche Photo Diodes . . . . .	34
2.3 Langmuir Probes . . . . .	34
2.3.1 Overview of the Langmuir Probe Technique . . . . .	35
2.3.2 Types of Probes Used in Ionosphere Measurements . . . . .	36
2.3.3 Measurement Accuracy . . . . .	37
2.3.4 Internal Consistency Checks . . . . .	37
2.3.5 Implementation Issues . . . . .	38
2.3.5.1 Boom Mounting . . . . .	38
2.3.5.2 Collector Surfaces . . . . .	38
2.3.5.3 Probe Contamination . . . . .	39
2.3.5.4 Magnetically Induced Potentials . . . . .	39
2.3.5.5 Adaptive Circuitry . . . . .	39
2.3.5.6 Spacecraft Design Factors . . . . .	40

2.3.6	Summary of Langmuir Probe Operations in Dense Plasmas . . . . .	41
2.3.7	Langmuir Probe Measurements in Low Density Plasmas . . . . .	41
2.4	Faraday Cups . . . . .	43
2.4.1	Introduction . . . . .	43
2.4.2	Instrument Description . . . . .	44
2.4.2.1	System Components . . . . .	44
2.4.2.2	Measurement Chain . . . . .	46
2.5	Plasma Analyzers . . . . .	49
2.5.1	Introduction . . . . .	49
2.5.2	The Retarding Potential Analyzer . . . . .	50
2.5.3	The Cylindrical Curved Plate Electrostatic Analyzer . . . . .	50
2.5.4	Spherical Sector Analyzers . . . . .	52
2.5.5	Top-Hat Analyzers . . . . .	54
2.5.5.1	Spherical Top-Hat Analyzers . . . . .	54
2.5.5.2	Toroidal Top-Hat Analyzers . . . . .	56
2.5.5.3	Electrostatic Deflection to Increase Field of View . . . . .	59
2.5.6	Magnetic Sector Analyzers . . . . .	59
2.5.7	Plasma Analyzer Summary . . . . .	61
2.6	Mass Spectrometers . . . . .	62
2.6.1	Performance Specifications . . . . .	62
2.6.2	Introduction to Magnetic and Electric Analyzers . . . . .	63
2.6.2.1	Magnetic Mass Spectrometers . . . . .	64
2.6.2.2	Double Focusing Magnetic Mass Spectrometers . . . . .	64
2.6.2.3	$E \times B$ Instruments . . . . .	66
2.6.3	RF Mass Spectrometers . . . . .	66
2.6.3.1	Quadrupole Analyzers . . . . .	66
2.6.3.2	Omegatrons . . . . .	69
2.6.3.3	Bennett Ion Mass Spectrometer . . . . .	69
2.6.4	Time-of-Flight Analyzers . . . . .	70
2.6.4.1	Continuous Operation TOF . . . . .	71
2.6.5	Linear Time-of-Flight Instruments with SSD . . . . .	74
2.6.5.1	Gated Time-of-Flight Analyzers . . . . .	76
2.6.5.2	Foils . . . . .	78
2.6.5.3	TOF Electronics . . . . .	78
2.7	Upper Atmosphere Neutral Gas Mass Spectrometers . . . . .	78
2.7.1	Examples of Neutral Gas Mass Spectrometers . . . . .	79
2.7.2	Gas Inlet . . . . .	80
2.7.3	Ionization Source . . . . .	82
2.7.4	Cruise Conditions . . . . .	83
2.7.5	Spectra . . . . .	83
2.8	Neutral Atom Imagers . . . . .	83
2.8.1	Introduction . . . . .	83
2.8.2	Measurement Principles . . . . .	84
2.8.3	Rejection of Other Signal Sources . . . . .	84
2.8.4	ENA Measurement Techniques . . . . .	86
2.9	Solid-State Detector Instruments . . . . .	90
2.9.1	Overview . . . . .	90

2.9.2	Solid-State Detector Telescopes . . . . .	90
2.10	Plasma Wave Instruments . . . . .	91
2.11	Electronics . . . . .	94
2.11.1	Amplifier and Discriminator Operation . . . . .	94
2.11.2	TOF Electronics . . . . .	95
2.11.3	Other . . . . .	97
2.12	Common Instrument Problems . . . . .	97
2.13	Data Handling . . . . .	98
2.13.1	Data Compression . . . . .	99
2.13.2	Transmission and Ground Processing . . . . .	100
2.14	Conclusion . . . . .	101
	Bibliography . . . . .	101
<b>3</b>	<b>Calibration Techniques</b>	<b>117</b>
3.1	Introduction to Calibration . . . . .	117
3.1.1	The Geometric Factor of Particle Instruments . . . . .	121
3.1.2	The Generic Mass Spectrometer Response . . . . .	125
3.1.3	Dead Time Corrections in Pulse Counting Systems . . . . .	131
3.2	Low and Medium Energy Electron Calibration . . . . .	134
3.2.1	Electron Sources for Instrument Calibrations . . . . .	135
3.2.1.1	Ultraviolet Photocathode Electron Sources . . . . .	135
3.2.1.2	Hot Filament Electron Sources . . . . .	137
3.2.1.3	Radioactive Electron Sources . . . . .	137
3.2.2	Test Equipment Considerations . . . . .	138
3.2.3	Instrument Simulations . . . . .	141
3.2.4	Sources of Non-Ideal Response . . . . .	143
3.2.5	Test and Calibration Procedures . . . . .	148
3.2.5.1	Component Testing . . . . .	148
3.2.5.2	Calibration Runs . . . . .	150
3.2.6	How to use the Calibrations for Post-Launch Data Processing . . . . .	154
3.3	Low Energy Ion Calibration . . . . .	157
3.3.1	Numerical Raytracing . . . . .	159
3.3.2	Laboratory Equipment . . . . .	160
3.3.3	Testing and Calibration . . . . .	165
3.3.4	Low-Energy Ion Calibration Facilities . . . . .	165
3.3.4.1	Bennett Ion Mass Spectrometer Calibration . . . . .	167
3.3.4.2	Calibration in a Real Plasma Environment . . . . .	169
3.3.5	Calibration of Faraday Cup Instruments . . . . .	169
3.3.5.1	Bench Testing . . . . .	170
3.3.5.2	Beam Testing . . . . .	172
3.3.5.3	Absolute Calibration with an Ion Beam . . . . .	175
3.4	Medium Energy Ion Calibration . . . . .	176
3.4.1	The Toroidal Imaging Mass-Angle Spectrograph . . . . .	177
3.4.1.1	Extraction of Calibration Constants From Calibration Measurements . . . . .	178
3.4.1.2	From Count Rates to Physical Quantities . . . . .	181
3.4.2	The Plasma and SupraThermal Ion Composition Instrument . . . . .	185

3.4.2.1	Calibration of the Entrance System . . . . .	187
3.4.2.2	Calibration of the Solid-State Detectors . . . . .	191
3.4.2.3	Calibration of the Microchannel Plate Detectors . . . . .	193
3.4.2.4	TOF Section Calibration . . . . .	194
3.5	High Energy Particle Calibration . . . . .	196
3.5.1	Calibration of Dosimeters . . . . .	198
3.5.1.1	Active Volume Determination . . . . .	200
3.5.1.2	Energy Calibration . . . . .	203
3.5.2	Calibration of Telescopes . . . . .	207
3.5.2.1	Geometric Factor Calculation . . . . .	208
3.5.2.2	Geometric Factor Measurement . . . . .	210
3.5.2.3	Electron Detection . . . . .	214
3.5.2.4	Conversion to Physical Units . . . . .	215
3.5.3	Calibration of Mass-Resolving Telescopes . . . . .	215
3.6	Thermal Gas Calibration . . . . .	224
3.6.1	The Quasi-Open Source and Thermal Gas Calibration . . . . .	225
3.6.2	Absolute Pressure Thermal Gas Systems . . . . .	226
3.6.3	Transfer Standard Thermal Gas Systems . . . . .	229
3.6.4	Gases Used for Thermal Gas Calibration . . . . .	237
3.7	Low Energy Neutral Beam Calibration . . . . .	237
3.7.1	Thermal Gas Beam Systems . . . . .	239
3.7.2	Miscellaneous Low Energy Beam Techniques . . . . .	241
3.7.3	Molecular Beam Techniques . . . . .	243
3.8	ENA Calibrations . . . . .	252
3.8.1	Charge Exchange Gas Cells . . . . .	253
3.8.2	Photo-Detachment Sources . . . . .	254
3.8.3	Surface Neutralization . . . . .	255
3.9	Cross-Calibration between the Flight Model and Laboratory Model . . . . .	258
3.9.1	Solar Wind Instrumentation . . . . .	259
3.9.2	Cometary Instrumentation . . . . .	259
3.9.3	Pioneer Venus ONMS Backup Sensor Calibration . . . . .	260
3.9.4	Cassini IMNS Backup Sensor Calibration . . . . .	261
	Bibliography . . . . .	262
<b>4</b>	<b>In-Flight Instrument Calibration and Performance Verification</b>	<b>277</b>
4.1	Introduction . . . . .	277
4.2	Sources of Instrument Degradation, Noise, and Spurious Responses . . . . .	279
4.2.1	Electrostatic Analyzers (ESAs) . . . . .	279
4.2.2	Gain Degradation in Electron Multiplier Detectors . . . . .	284
4.2.3	Time-of-Flight Detector Systems . . . . .	289
4.2.4	Energetic Particle Detectors . . . . .	290
4.2.5	Neutral Gas Instruments . . . . .	292
4.2.6	ENA instruments . . . . .	294
4.2.7	Faraday Cup Instruments . . . . .	295
4.2.8	Langmuir Probes . . . . .	296
4.2.8.1	Current-Measuring Probes . . . . .	296
4.2.8.2	Voltage-Measuring Probes . . . . .	298

---

4.2.9	Unexpected Sources of Noise . . . . .	300
4.3	Identification of Instrument Degradation, Noise, and Spurious Responses . . . . .	303
4.3.1	Identifying Gain Degradation in Electron Multiplier Detectors . . . . .	304
4.3.2	Identifying Degradation in Time-of-Flight Detector Systems . . . . .	311
4.3.3	Identifying Noise and Radiation Damage in Solid-State Detectors . . . . .	312
4.3.4	Identifying Degradation in Neutral Gas Instruments . . . . .	317
4.3.5	Identifying Degradation and Noise in ENA Instruments . . . . .	319
4.3.6	Identifying Degradation in Faraday Cup Instruments . . . . .	320
4.3.7	Identifying Degradation in Langmuir Probes . . . . .	322
4.3.7.1	Current-Measuring Probes . . . . .	322
4.3.7.2	Voltage-Measuring Probes . . . . .	322
4.3.8	The Use of Artificial Signal Injection for Instrument Performance Verification . . . . .	323
4.4	Relative and Absolute Calibration of Plasma Instruments . . . . .	324
4.4.1	Introduction . . . . .	324
4.4.2	Physical Principles . . . . .	326
4.4.2.1	Use of Wave-Determined Plasma Densities . . . . .	326
4.4.2.2	Calculating Particle Moments and Correcting for Spacecraft Charging . . . . .	327
4.4.2.3	Charge Neutrality . . . . .	330
4.4.2.4	Gyrotropy . . . . .	331
4.4.2.5	Pressure Balance . . . . .	332
4.4.2.6	Alfvén Waves . . . . .	332
4.4.2.7	Intra-Satellite versus Inter-Satellite Calibrations . . . . .	332
4.4.3	Geotail . . . . .	332
4.4.4	Polar-Hydra . . . . .	337
4.4.5	Wind 3D Plasma . . . . .	340
4.4.6	Cluster CIS . . . . .	347
4.4.6.1	Absolute Efficiencies . . . . .	347
4.4.6.2	Relative Efficiencies . . . . .	348
4.4.6.3	Pressure Balance . . . . .	350
4.4.6.4	Three-Spacecraft Check of Calibrations . . . . .	350
4.4.7	NOAA-POES . . . . .	350
4.4.8	FAST . . . . .	356
4.4.9	Wind Faraday Cups . . . . .	359
4.4.9.1	SWE/FC and Waves . . . . .	360
4.4.9.2	SWE/FC and MFI . . . . .	361
4.4.9.3	CELIAS/MTOF Proton Monitor with SWE/FC . . . . .	362
4.4.9.4	Moment versus Non-Linear Analysis Methods . . . . .	364
4.4.10	In-Flight Testing in Special Circumstances . . . . .	365
4.4.11	Langmuir Probes . . . . .	366
4.5	In-Flight Relative and Absolute Calibration for Energetic Particles . . . . .	367
4.5.1	Absolute Energy Response Calibration . . . . .	368
4.5.2	Relative Flux Response (Multi-Spacecraft) . . . . .	370
4.6	In-flight Relative and Absolute Calibration for Neutral Gas Sensors . . . . .	371
4.7	In-Flight Relative and Absolute Calibration for ENA Instruments . . . . .	376
4.8	Conclusion . . . . .	377

Bibliography . . . . .	378
<b>5 Summary and Outlook</b>	<b>387</b>
5.1 Summary of Previous Chapters . . . . .	387
5.2 Future Calibration Needs . . . . .	388
5.3 Absolute Calibration and Traceability . . . . .	388
5.3.1 The Importance of Traceability to the Space Community . . . . .	389
5.3.2 Lack of Adequate Standards . . . . .	389
5.3.3 Summary and Recommendation . . . . .	390
5.4 Calibration Transfer Standard . . . . .	390
5.4.1 Cross-Calibration Between Facilities . . . . .	391
5.4.2 Non Beam Blocking Current Meter . . . . .	391
5.4.3 Internal Reference Standard . . . . .	392
5.5 New Techniques to Improve Calibration . . . . .	392
5.5.1 Challenges for Small Series Production . . . . .	393
5.5.2 Instrument Response Modeling . . . . .	394
5.5.3 Statistical methods . . . . .	394
5.5.4 Artificial Intelligence Methods . . . . .	394
5.6 Machine Learning Methods for Automated Calibration . . . . .	394
5.6.1 Current State-of-the-Art and Related Work . . . . .	395
5.6.2 Machine Learning Methods . . . . .	396
5.6.2.1 Model Learning . . . . .	396
5.6.2.2 Transfer Learning . . . . .	396
5.6.2.3 Active Learning . . . . .	398
5.6.3 Other Methods . . . . .	398
5.7 Summary . . . . .	399
Bibliography . . . . .	399
<b>Appendix</b>	<b>401</b>
<b>A Raytracing in Instrument Design</b>	<b>401</b>
A.1 Electric Field Solving Program . . . . .	402
A.2 Particle Ray Tracing Program . . . . .	407
A.3 Display Programs for Characterizing Analyzers . . . . .	411
A.4 Raytracing Software . . . . .	414
Bibliography . . . . .	418
<b>B High Energy Instrument Modeling</b>	<b>421</b>
B.1 Instrument Development Process . . . . .	421
B.2 Monte Carlo Codes . . . . .	425
B.3 Numerical Issues . . . . .	426
B.4 Random Number Generation . . . . .	427
B.5 Reduction of Variance . . . . .	429
B.6 Problems in Using Monte Carlo Simulations . . . . .	430
B.7 Conclusions . . . . .	431
B.8 Some Available Monte Carlo Codes . . . . .	432
Bibliography . . . . .	433

---

<b>C Calibration Facilities</b>	<b>435</b>
C.1 Summary of Calibration Facilities . . . . .	435
C.2 Description of Calibration Facilities . . . . .	449
Bibliography . . . . .	510
<b>D Space Physics Basics</b>	<b>511</b>
D.1 Distribution Functions . . . . .	511
D.2 Space Physics Terms . . . . .	512
D.3 Moments Calculation . . . . .	515
D.4 Typical Parameters of Space Plasma . . . . .	516
D.5 Comparative Characteristics of Different Mass Spectrometers . . . . .	516
<b>E Glossaries and Acronyms</b>	<b>519</b>
E.1 Glossary of Metrology . . . . .	519
E.2 Acronyms . . . . .	524
E.2.1 Institutions . . . . .	524
E.2.2 Spacecraft . . . . .	525
E.2.3 Instruments . . . . .	527
E.2.4 Other Acronyms . . . . .	531
E.2.5 Radiation Effects on Electronics . . . . .	533
<b>F Units and Constants</b>	<b>535</b>
F.1 SI Base Units . . . . .	535
F.2 SI Derived Units . . . . .	535
F.3 SI Prefixes . . . . .	539
F.4 Units Outside the SI . . . . .	539
F.5 Constants . . . . .	541
F.6 Units and Unit Conversion . . . . .	542
<b>G Relative Isotopic Standard</b>	<b>545</b>
<b>H Fragmentation Patterns and Total Ionization Cross Sections</b>	<b>555</b>
H.1 Neutral Gas Electron Impact Mass Fragmentation Patterns . . . . .	556
H.2 Neutral Gas Electron Impact Total Ionization Cross Sections . . . . .	561
Bibliography . . . . .	569
<b>I Authors' Addresses</b>	<b>571</b>
<b>Index</b>	<b>575</b>
