

Radiative transfer in *everywhere!* galactic disks...

Simone Bianchi

INAF-Osservatorio Astrofisico
di Arcetri, Firenze

... using *TRADING*
Transfer of RAdiation through
Dust IN Galaxies (Bianchi 2008)

TRADING features

Continuum RT in a dusty medium

Monte Carlo code

An adaptive grid for dust

Stellar emission from diffuse/point-like sources
of different spectra

Thermal & stochastic dust emission
from a distribution of grain sizes and material
(Now Draine & Li 2007)

Dust self-absorption.

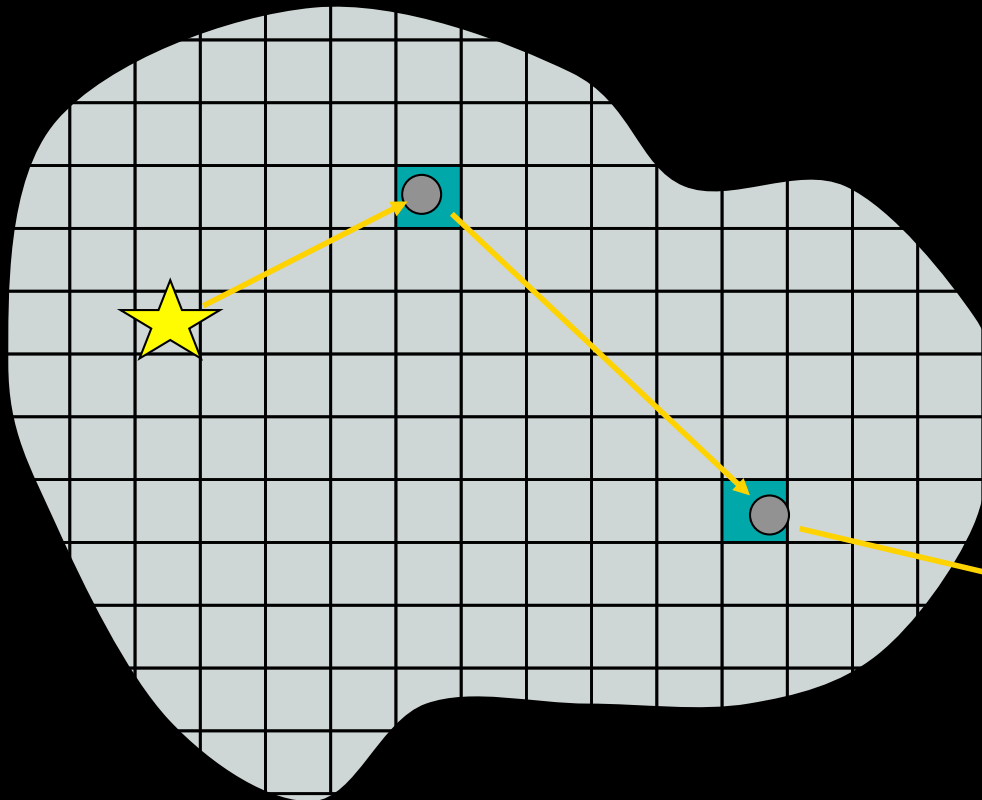

RT and the Monte Carlo Method

The path of a photon through dust

Emission
from stars

Extinction:
scattering *or*
absorption ?

Out of dust:
observed

Several images

RT and the Monte Carlo Method

Emission from dust

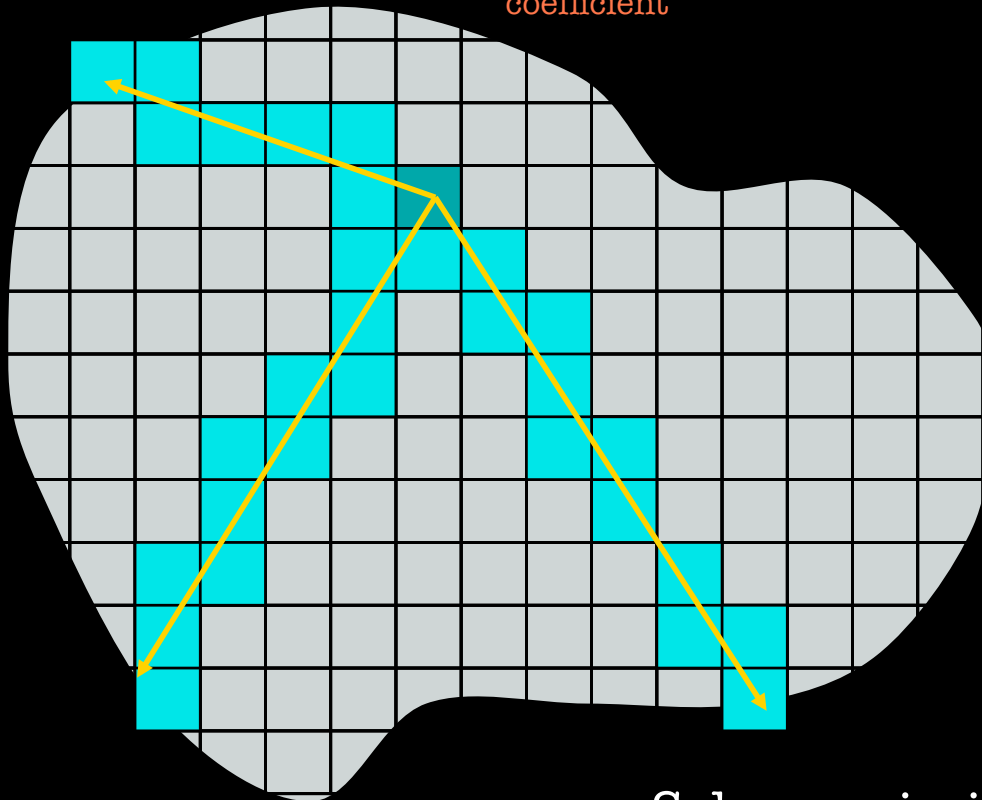

$$J_{\lambda} = \frac{W_{\lambda}}{4\pi\kappa_{\lambda}}$$

Absorbed energy

Mean absorption coefficient

j_{λ} Dust Emission Coefficient
Thermal & Stochastic heating

Dust self absorption
(iteratively)

Scheme similar to DIRTY (Misselt et al. 2001)

RT and the Monte Carlo Method

Emission from dust

$$J_{\lambda} = \frac{W_{\lambda}}{4\pi\kappa_{\lambda}}$$

Absorbed energy

Mean absorption coefficient

j_{λ} Dust Emission Coefficient
Thermal & Stochastic heating

Dust self absorption
(iteratively)

l.o.s. integration

Scheme similar to DIRTY (Misselt et al. 2001)

Real galaxies vs models

NGC 5746

+ 6 other objects
Bianchi (2007)

V band

model

K' band

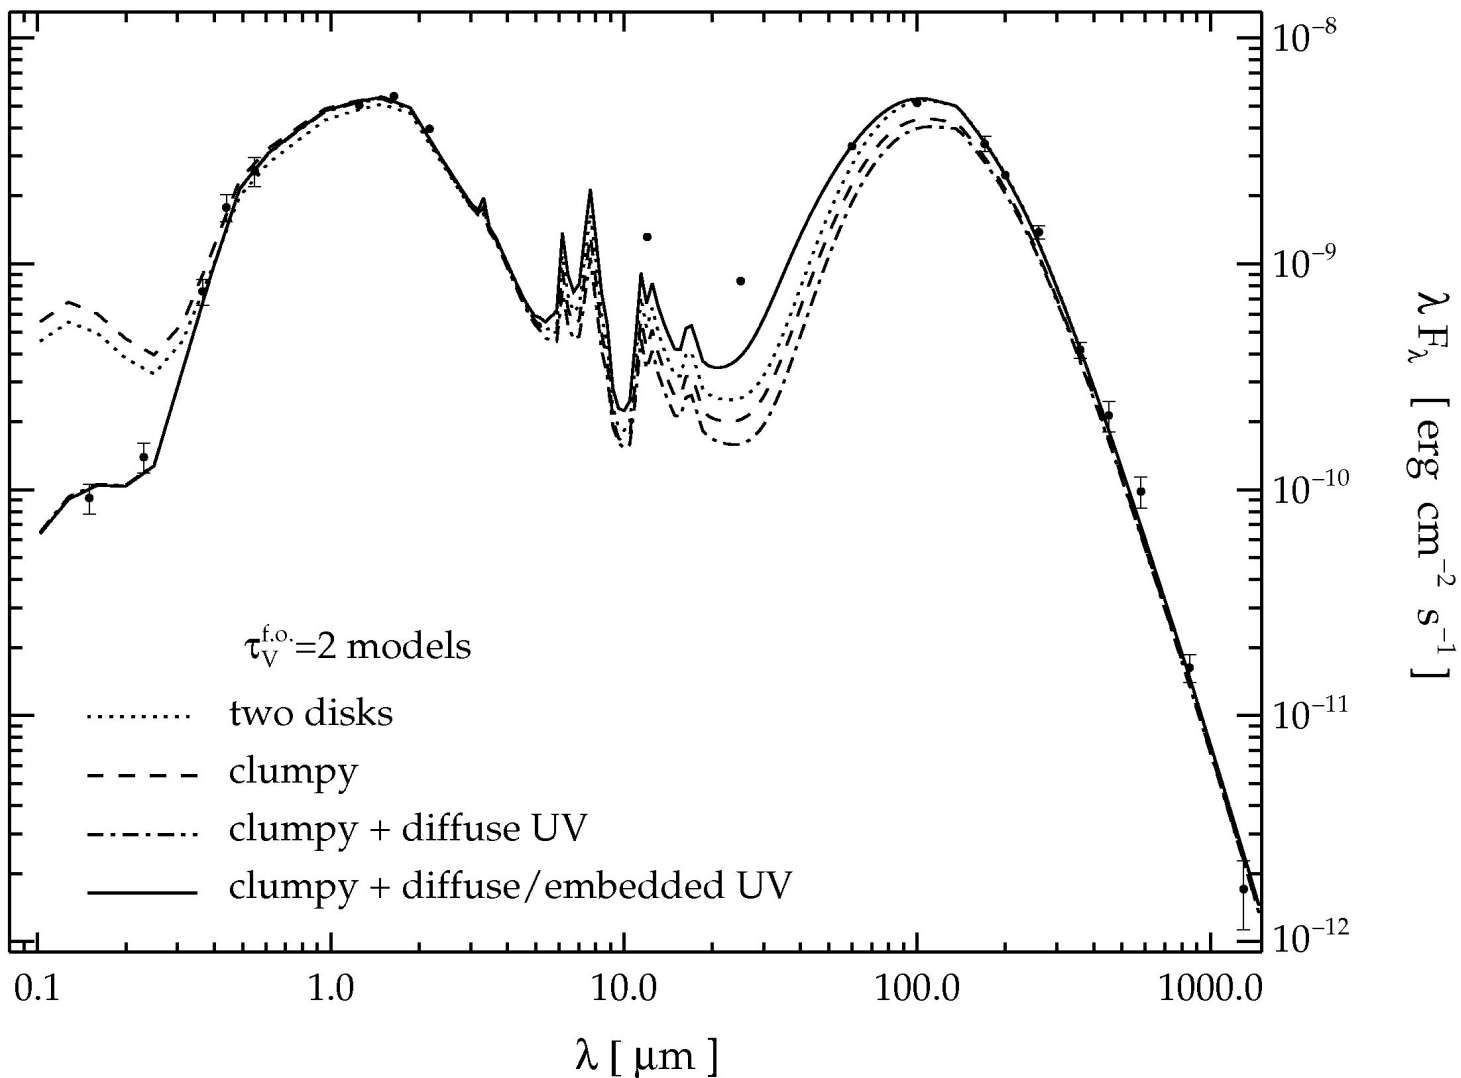

model

Model of an NGC891 -like galaxy
seen at $i=86^\circ$ (Bianchi 2008)

Spectral Energy Distribution

Checking the code

Ivezic et al. 1996

Pascucci et al. 2004

Checking the code

Comparison with SKIRT (Baes et al 2005)

TRADING in MODULO

Dust mass in BCDs via SED fitting (Hunt et al. 2005)

Use of DUSTY (Ivezic & Elitzur, 1997)

point source in a dusty sphere (compact/*active*)

fast & *exact*

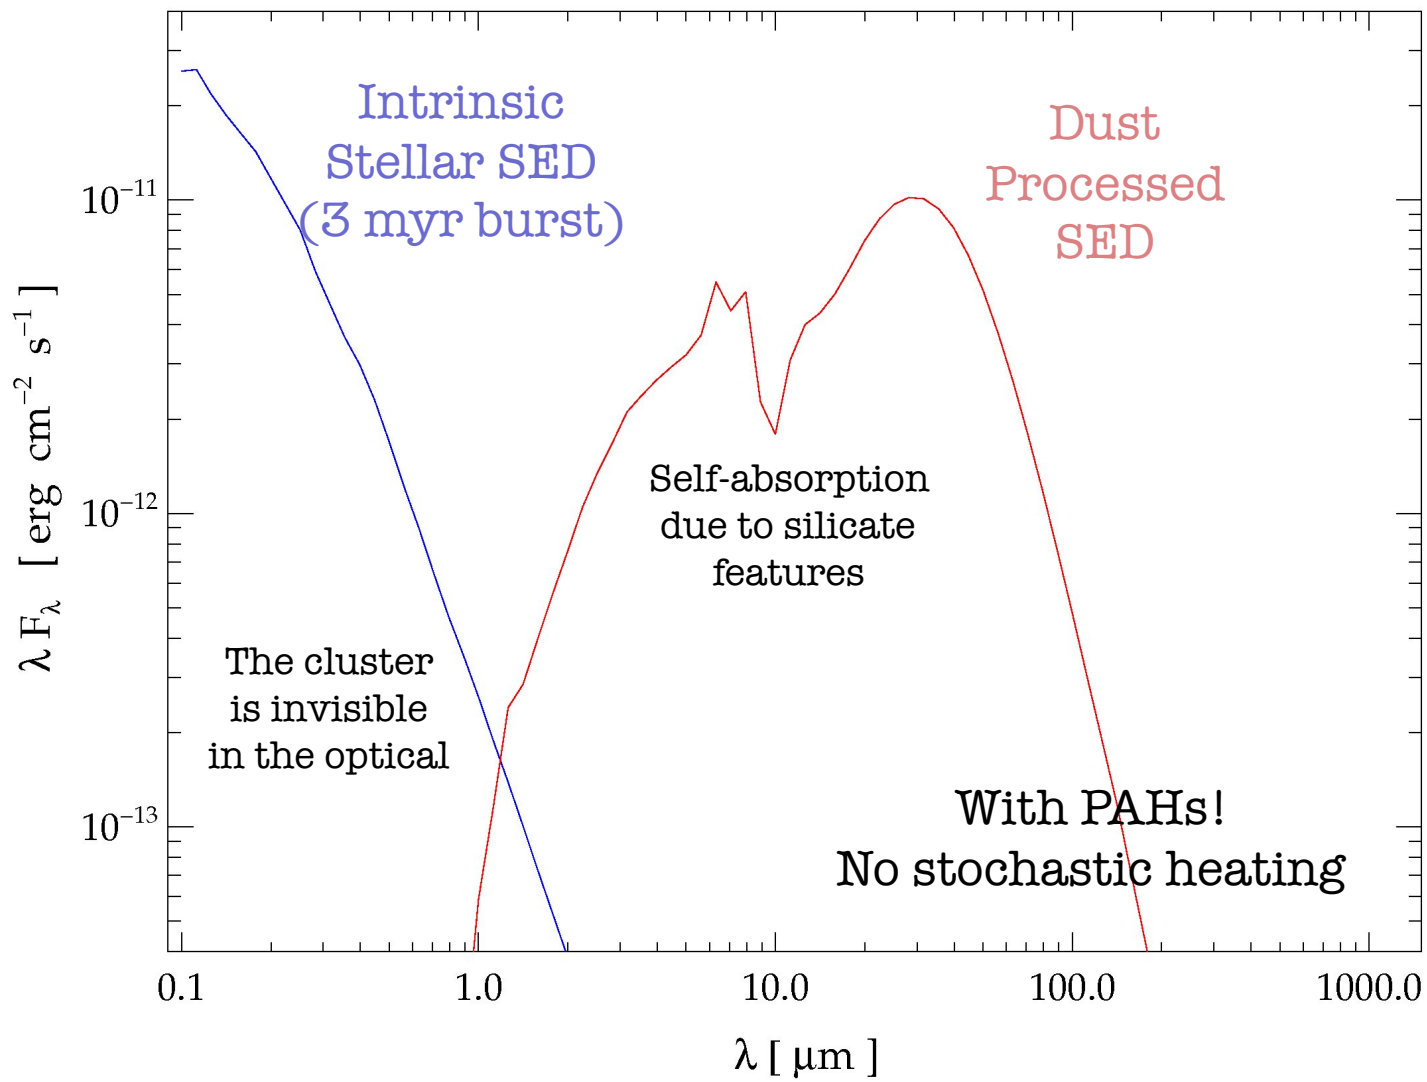

mean opacity, isotropic scattering, no PAHs

An example: the *active* BCD SBS0335-052

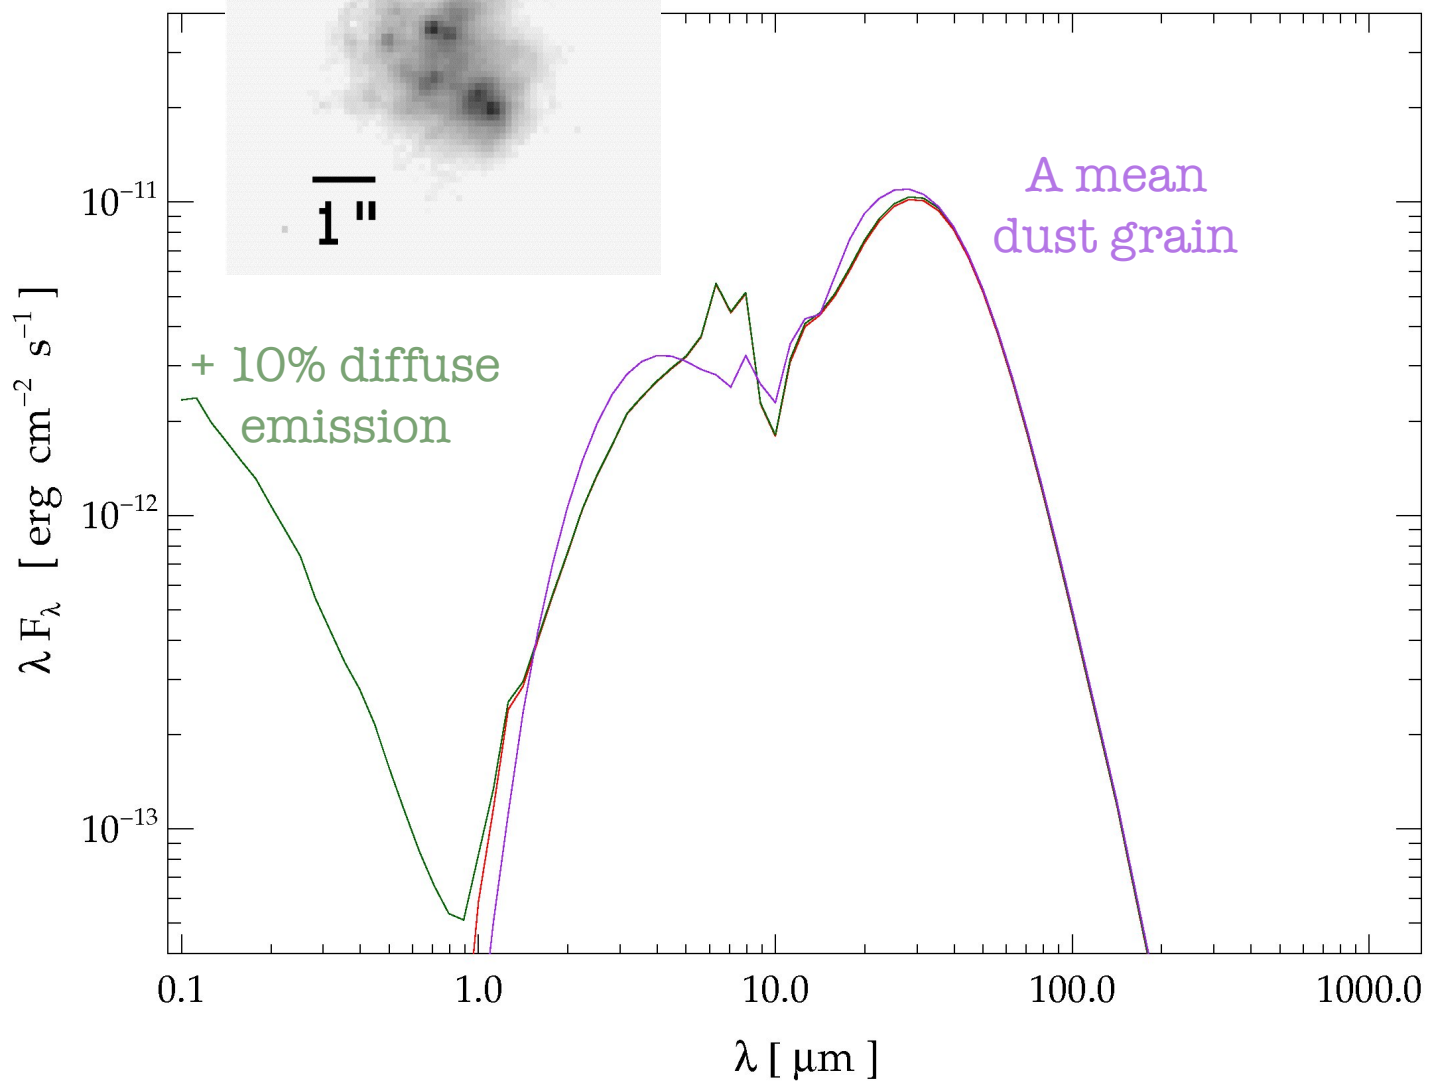

A SSC with $L=1-2 \times 10^9 L_{\odot}$

in a $\tau_V=30$ sphere

$R = 6 - 100$ pc (Hunt et al. 2005, Plante & Sauvage 2000)

HST V band
Thuan et al. 1997

Some conclusions...

For compact/active objects, point source geometry (DUSTY) should be OK

For less compact (passive) objects it might be important to include diffuse emission (if any)
