

A data & software exchange platform

- Platform combining **GitLab** and **Zenodo**
- ISSI “sandbox” repositories:
 - Shared accounts set up by SILSO (Sabrina Bechet) in January 2018 on cloud-as.oma.be
 - Based on “triads”: SunspotNb_SILSO, GroupNb_HS, ...
- Very low activity: no questions, no files uploaded
- Manpower at SILSO too limited
 - to promote the use of the platform
 - to offer tutorials

Creating is easy but continuous content maintenance is more demanding.

- World Data System: Zenodo and GitLab not certified as reliable long-term data preservation platform

A data & software exchange platform

- Community not yet prepared to use these new tools?
- Which alternate sharing modes?
- Who can commit to maintain this platform on a permanent basis?
