

# Using Tidal Disruption Events to Study Super-Massive Black Holes

## Workshop

8–12 October 2018

Black holes occasionally reveal themselves when passing stars get ripped apart by their gravity. These tidal disruption events have created a new way for astronomers to map hidden black holes.

### Conveners

Peter Jonker, SRON, Netherlands Inst. for Space Research, Utrecht, The Netherlands

Maurizio Falanga, International Space Science Institute, Bern, Switzerland

Iair Arcavi, Las Cumbres Observatory Global Telescope, Goleta, USA

Sterl Phinney, California Institute of Technology, Pasadena, USA

Elena Rossi, Leiden Observatory, The Netherlands

Sjoert van Velzen, The Johns Hopkins University, Baltimore, USA
